

MT-1: Essential Peripheral Seminar (REMOTE LIVE)

“Great humor. Presented in a way that made sense and was interactive. Being remote allowed me to take a MAPs course without having to spend a lot of money traveling. Looking forward to taking it in person to reinforce what I have learned. This course made me realize how I have deviated away from clinical reasoning to treat patients, and have taken an easier path relying on the assessment. In the two days following the course I have implemented assessment and treatment techniques that have shown immediate improvements just by relying on assessment and grades of mobilizations that were the focus of the course.”

-Lynn Meyer, MT-1R, April 2023

“I enjoyed the easy going manner in which the material was presented and that adequate time was given for each subject.”

-A. Linley, MT-1R, April 2023

“Instructor was very knowledgeable and kept my attention. Course material was interesting and I will be able to apply it to my clinical practice. Thank you!! Great course! I would highly recommend taking this to improve your clinical and manual skills.”

-Dana Covington, MT-1R, April 2023

“Thanks so much for a great course! I’ll be honest I wasn’t sure how a live remote course option was going to go for a lab-based course but I definitely found it very helpful and well-presented! I’ve been wanting to take a Maitland course since 2016 when I was maybe halfway through my ortho residency and I visited a booth in ATL at an ortho section meeting. I was totally convinced I wanted to do the fellowship! (Would still love to...maybe in time!) Life flies by so fast and I can’t believe I am just getting around to it. I suppose I got distracted by life and other exciting courses along the way. I definitely hope to get to more Maitland courses soon!”

-Amanda Bell, MT-1R, April 2023

“The ability to immediately apply the techniques to patients in the clinic.”

-S. Patene, MT-1R, November 2022

“I like seeing the techniques close up as this is difficult in an person course.”

-B. Berg, MT-1R, November 2022

“Chris is a wonderful instructor for this course as he is very knowledgeable at describing, performing, and proving the effectiveness of MT 1 techniques. His video demonstrations were very thorough and the explanation of each maneuver was clearly understood.”

-A. Gagliardi, MT-1R, November 2022

“I liked that I could do it from home. Traveling is not easy for me with two young children. Also, traveling is expensive and it was nice not to have that cost associated with learning. I'm thankful for this method”

-Lindsay Krusich, MT-1R, November 2022

“I enjoyed the group interactions in Zoom and Chris's sense of humor. This course will definitely enhance my clinical practice and I will incorporate manual therapy into most treatments now.”

-J. Kast, MT-1R, November 2022

"The instructor (Chris) made the class fun and enjoyable. The pre-course assignments were very helpful. Course was very informative and I believe what I learned will be very useful at my job."

-B. Farley, MT-1R, November 2022

"Chris was of course, as expected, very knowledgeable. I really appreciate him sharing not only his professional expertise, but also his life experiences."

-Roy Asuncion, MT-1R, January 2022

"I really appreciated the importance of the assessment - taking the patient subjective exam and matching that information up with the clinical exam - and not relying solely on diagnostic testing results."

-C. Stayeas, MT-1R, January 2022

"Enjoyed the course and the instructor very much. Left the course feeling more confident in my manual skills and more techniques to utilize"

-Lee Preston, MT-1R, September 2021

"I really enjoyed the course and will be implementing the new techniques in my patient sessions whenever I can. I am looking forward to taking additional MAPS courses!"

-J. Hoffman, MT-1R, September 2021

"Dynamic setting, most of the theory and evidence was presented in the pre-course materials making it possible to dive deeper into the techniques. The presenter was extremely knowledgeable and willing to help if there was difficulty with a given technique"

-Aaron Anderson, MT-1R, September 2021
